

# Software Requirements Specification (SRS) Document

## 1. Introduction

### 1.1 Purpose

DevelopersGuild (DevGuild) is a platform designed to help developers turn project ideas into reality by connecting like-minded individuals. It facilitates collaboration, motivation, and teamwork to transform creative ideas into real-world projects.

### 1.2 Document Conventions

- Bold text is used for key headings.
- Bullet points highlight features and processes.
- Numbering is used to structure sections logically.

### 1.3 Intended Audience and Reading Suggestions

This document is intended for:

- Developers working on DevGuild
- Project Managers overseeing development
- Testers verifying platform functionality
- Stakeholders reviewing platform scope and requirements

### 1.4 Project Scope

DevGuild provides a structured approach for users to create and join projects, ensuring smooth collaboration. Features include:

- User authentication (Admin and regular users)
  - Project creation and management
  - AI-powered project rating
  - Collaboration request system
  - Project monitoring and completion tracking
-

## 2. Overall Description

### 2.1 Product Perspective

DevGuild is a web-based application that acts as a collaborative platform. It includes user authentication, project creation, request management, and AI-based project evaluations.

### 2.2 Product Functions

- **User Authentication:** Login, signup, and profile setup
- **Admin Dashboard:** Manage users and projects
- **Project Management:** Create, monitor, and complete projects
- **Collaboration Requests:** Join projects and manage team requests
- **AI Project Rating:** Evaluate project potential
- **Project Lifecycle Management:** Track active, inactive, and completed projects

### 2.3 User Characteristics

- **Developers:** Looking to create or join projects
- **Project Creators:** Initiate and manage projects
- **Admins:** Oversee platform operations

### 2.4 Constraints

- Internet access required
  - Users must accept privacy policies
  - AI ratings are based on predefined parameters
- 

## 3. Specific Requirements

### 3.1 Functional Requirements

#### 3.1.1 User Authentication

- Users can log in or sign up.
- Admins have separate login credentials.
- New users must complete their profile.

#### 3.1.2 Project Management

- Users can create and manage projects.
- AI assigns project ratings based on defined criteria.

- Users can request to join projects.
- Project creators can accept or reject requests.

### 3.1.3 Collaboration and Monitoring

- Creators monitor project status.
- Users are removed if they do not meet expectations.
- Projects are marked as **ACTIVE, INACTIVE, or COMPLETED** based on progression.

## 3.2 Non-Functional Requirements

- **Security:** Secure authentication and data protection
  - **Performance:** Fast response times for project and user management
  - **Scalability:** Supports multiple users and projects concurrently
  - **Usability:** Intuitive UI for seamless navigation
- 

# 4. System Workflow

## 1. User Authentication

- Sign up or log in
- Admins access dashboard
- Users proceed to profile setup (if first-time login)

## 2. Project Lifecycle

- Users create or select projects
- Collaboration requests managed
- AI assigns ratings
- Active projects monitored until completion or inactivity

## 3. Project Completion

- Completed projects award scores
  - Inactive projects end automatically
- 

# 5. Appendices

- API documentation
- UI wireframes
- Database schema
